

## **Installation PCMCIA V.90 under Windows 98**

- a. Plug in the card into the PCMCIA-Slot (TYP II or TYP III). If you have problems to find the right slot, have a look at the manual of your PC or ask the manufacturer respectively your PC-dealer. Make sure that the card is plugged in tough.
- b. Connect the card with the delivered phone cable (possibly with adapter) with the N-Slot at the wall socket of the phone-line.
- c. Start your PC.
- d. The PC signalizes *"New Hardware found – PCMCIA Card Service"* and installs that one. This message only appears if there has been no PCMCIA Card Service installed.
- e. After this the PC signalize *"New Hardware found"* and starts the hardware assistant.
- f. The message appears *"This assistant search for new drivers for the standard PCMCIA-Card-Modem."* Confirm the message with *"Next"*.
- g. *"What do you want to do?"* Choose the option *"Search the best driver for the device automatically (recommended)"*, put in the disc with the label *"driver disc"* and click the button *"Next"*.
- h. Now choose *"disc"* and go further with *"Next"*.
- i. *"The driver file for the following device is been searching: "PCMCIA V.90 Fax Modem Card"*. The position of the driver is: *a:\fmcv11n.inf*. Push the button *"Next"*.
- j. *"PCMCIA V.90 Fax Modem Card"*. *"The software for this device has been installed."* Confirm with *"Finish"*.
- k. *"To finish the installation of the hardware, you have to reboot your PC. Should your PC rebooted now?"* Confirm with *"Yes"*. (Remove the disc from the floppy).

### **Installation of the modem utilities (necessary to change the country settings):**

Put in the disc with the label *"World Traveler Modem Setup Utility"* and start the setup.exe. Now the utilities will be installed and you can use them under *start – program – World Travel*.
